

SINGLE-CLAMP HOT-MELT PERFECT BINDER/PADDER

860 Sterling DigiBinder

ROSBACK

The Rosback Model 860 Sterling DigiBinder is a machine built for the twenty first century. Whether you are a printer, an in-plant printer, an on demand printer, or even a bindery, the Sterling DigiBinder will fill the job.

The Rosback Sterling DigiBinder will bind books automatically with a touch of a button. The book thickness is self-adjusting. Simply place the book in the clamp and the Sterling DigiBinder will do the rest: it automatically sets the clamp thickness. The unique blade roughs and notches the entire book spine. Twin glue rollers apply an even amount of glue and the nipper automatically adjusts to the book thickness.

Only a few manual adjustments need to be made.

- Set the glue temperature
- Set the nipper dwell time
- Set the book height for the nipper plate

The latter allows you to bind books with case bound covers on down to light cover stock.

Bind book samples or commercial distribution. Good for runs of one to hundreds and thousands, built for thousands of runs. The user-friendliness of the Sterling DigiBinder will astound you. No jam ups, no setups. One touch perfect binding is here with...

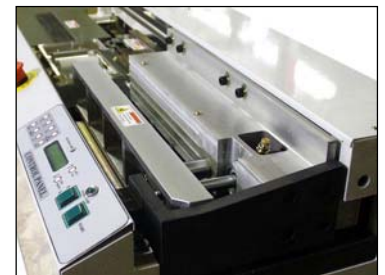

The Rosback Model 860 Sterling DigiBinder.
